

# Media-rich web applications with Macromedia Flash

Darren Carlson

# Too much for 20 minutes!

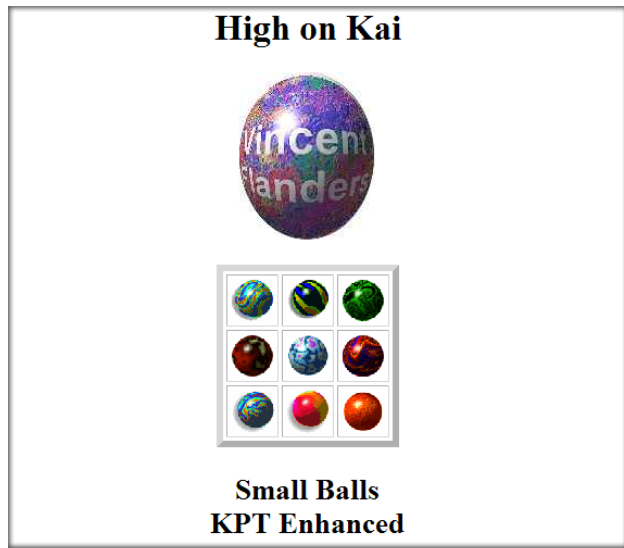

## Topics

- An introduction to Macromedia Flash
- Overview of Flash media support
- Overview of Flash ActionScript 2.0
- Putting it all together!

# Introduction

## Remember the 90's?

'Questionable' web design from the mid 1990s

Video conferencing in the mid 1990s

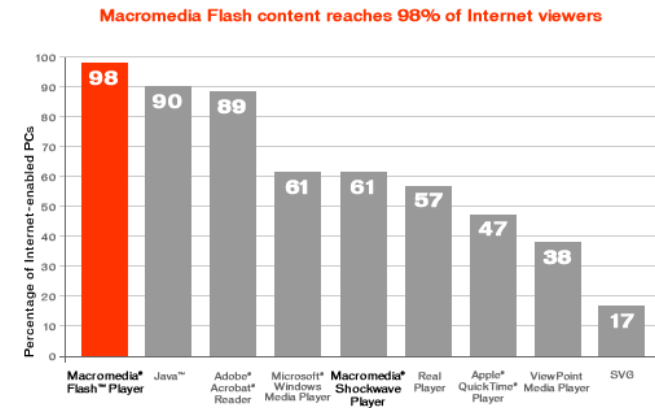

*"The prototype would not only **quit unexpectedly**, but would often require help from the development team to get it running again."*

*- ACM Paper 1994: [www.izix.com/pro/media/montage.php](http://www.izix.com/pro/media/montage.php)*

# Macromedia Flash

## Flash – what it it?

- Product from Macromedia (1995)
- Originally a vector animation tool
- Browser plug-in (large install base)
- Driving towards ‘media-rich’ web-applications (v6 & v7).

Macromedia Claims 98% Coverage with Flash

## Vital for Macromedia?

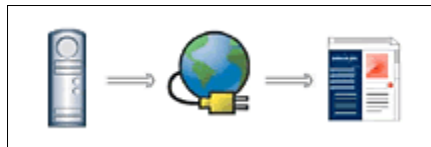

- Broadband access climbing
- Maturing web technologies
- Threats from everywhere!

# New Macromedia Flash Features

## Audio / Video Support \*

Media capable with support for streaming & progressive download

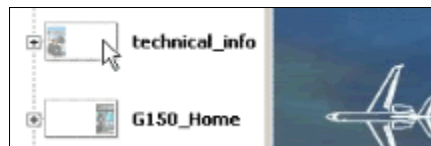

## Data Integration

Data binding allows automatic data integration and updates (XML support)

## ActionScript 2.0 \*

Object oriented scripting language support for advanced applications

## Screens-Based Application Development

Organizational technique for developing applications without the timeline

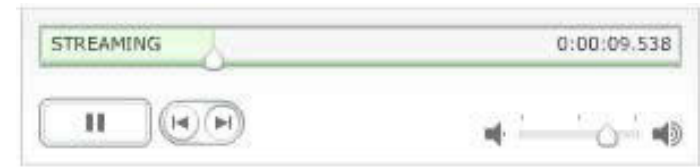

## Component Technology

An extended architecture for 'self-contained' *pre-made* Flash objects

# Flash Media – Audio Support

## Audio Subsystem

- MP3 support
- Both streaming & download
- Asynchronous loading
  - Multi-threaded
- Positioning possible
  - Unreliable position data in certain states!
- Controllable via ActionScript

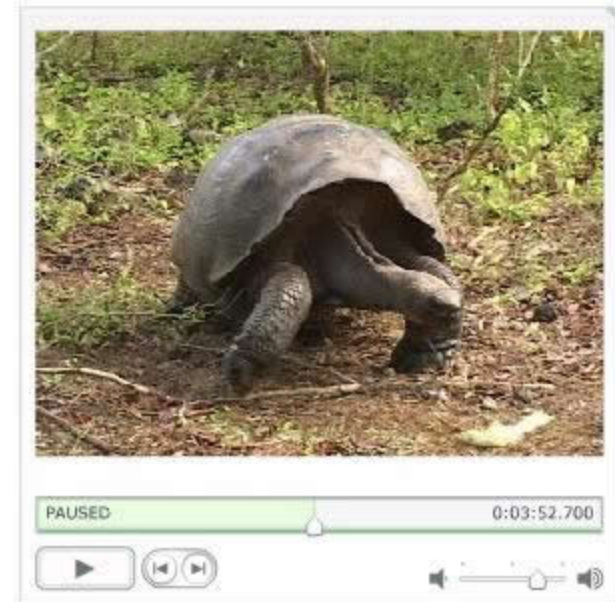

**Macromedia MediaPlayer component  
with streaming audio support**

# Flash Media – Video Support

## Video Subsystem (Methods)

- Embedded
  - Full download required
  - Sync issues after 120 seconds
  - Frame-rate tied to timeline rate
- Progressive download
  - Fast start capable
  - No sync issues
  - Independent frame-rates
- Streaming (Comm Server)
  - Live video possible
  - Network efficiency

**Macromedia MediaPlayer component  
with streaming video support**

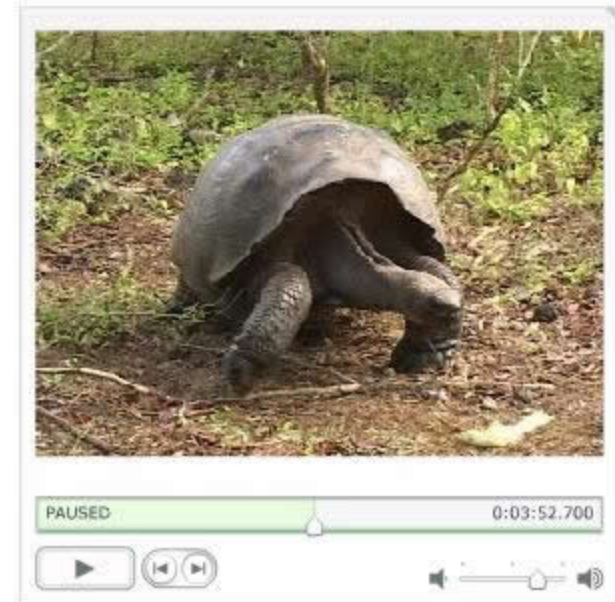

# Flash Media – Video Support

## Video Subsystem (Details)

- Single codec: Sorenson Spark
- Based on *modified* H.263v1
  - GOB layer / PB-Frames
  - Arbitrary picture width and height up to 65,535 pixels

## Export Support

- Adobe After Effects
- Final Cut Pro
- Most Avid Systems
- Discreet Cleaner XL

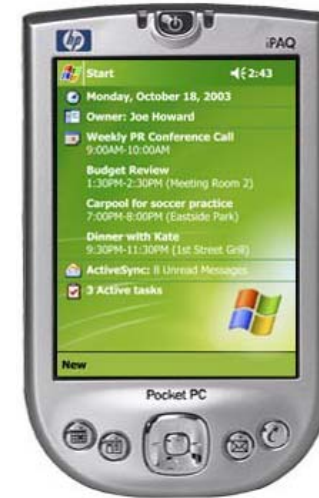

Macromedia MediaPlayer component  
with streaming video support

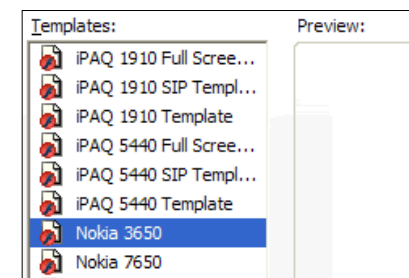

# Flash Media - Mobile Devices

## Device support

- Devices running PocketPC
- The faster the better! (Xscale / ARM)
- Plug-in for Microsoft Pocket Explorer.
- Video and audio is fully supported!
- Vector graphics engine optimized
- Multi-platform (Linux prototyping)

iPAQ Support with Media

Included device templates

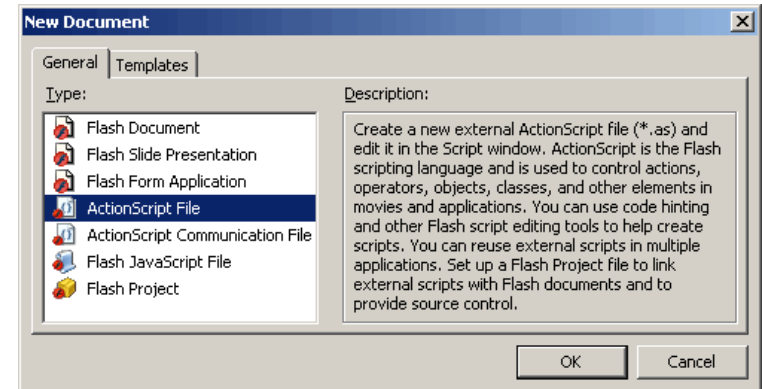

# ActionScript 2.0 Overview

## Object Orientation in Flash!

- Encapsulation (external classes)
- Inheritance (Events, State)
- Polymorphism (Interfaces)

## Other Notable Features

- ‘Java style’ package support
- ‘Strict’ data typing
- Access to extra functionality

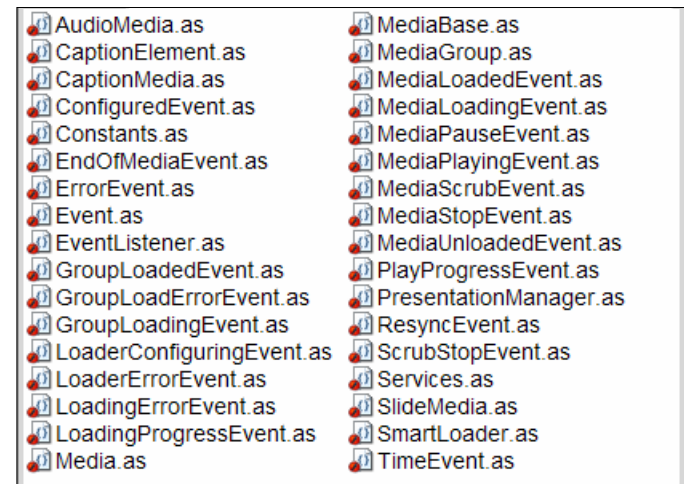

**Macromedia Flash Professional 2004  
with built-in code editor**

# ActionScript 2.0 Details

## ActionScript Keywords

- **class**
- **extends**
- **implements**
- **interface**
- **dynamic**
- **static**
- **public**
- **private**
- **Import**

A sample ActionScript Package Structure

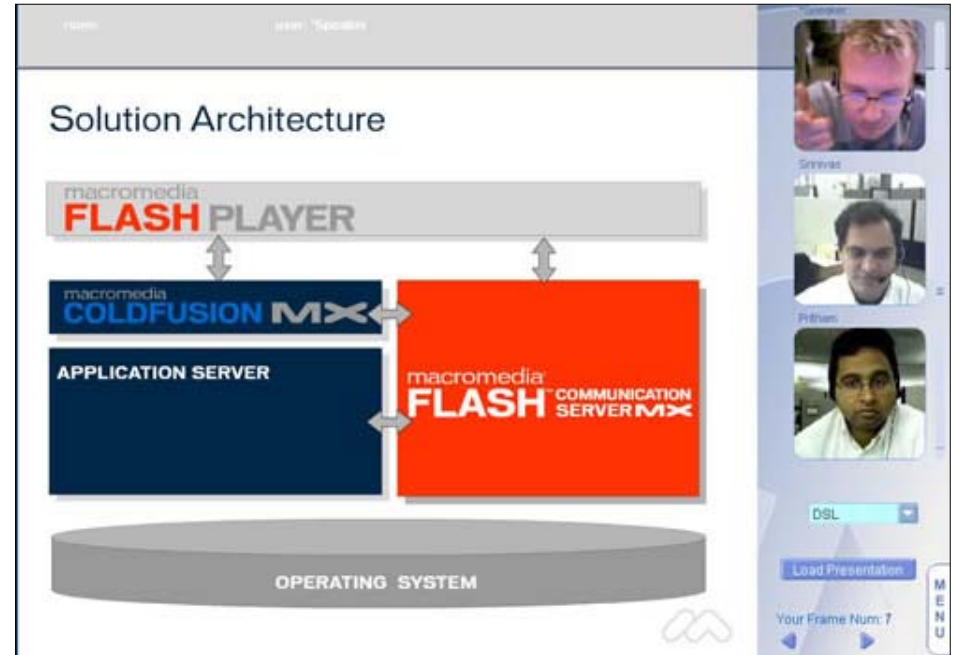

## What's Missing?

- **Abstract classes (abstract)**
- **Final classes (final)**
- **A real private scope**
- **Protected classes (protected)**
- **Real constants (constant)**
- **Overloading**
- **Runtime type checking**

# And all this means... what?

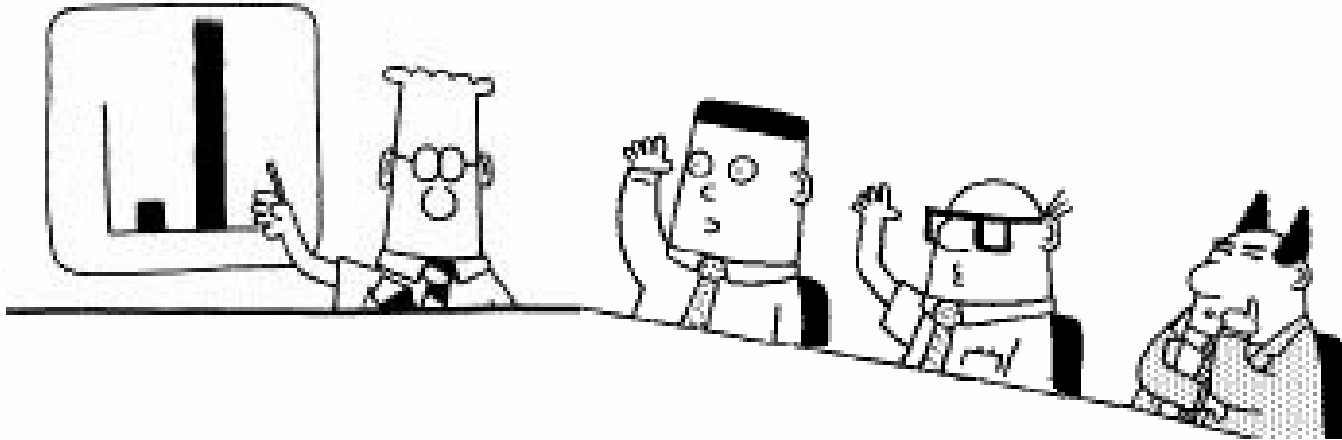

## Rich Media Apps

- High quality media
- Fast vector graphics
- Object oriented code
- Connection with
  - Web services
  - XML data
  - Comm server

The Macromedia Solutions Architecture
